Subject: Balboa - PUC parcel potential loading for EIR
Attachments: PUC open space section.pdf; SFPUC Retained Fee Guidelines (Final).pdf

Hi James,

I know you're working on some potential solutions for the loading issue that's been raised through the Balboa EIR study at Lee Ave. As I understand it, one of the solutions could be to bring trucks onto the PUC property. I just wanted to call to your attention that the PUC regulates loading on top of their pipelines which may create an issue. More detail is in the PUC attachment on the second page under "Loading".

The other attachment has the probable location of the actual pipelines, which looks to be close to the Whole Foods property line.

Leigh
